1 Horizon:Something went wrong! An unexpected error has occurred.

horizon

Hi i am new with Openstack and following the below tutorial
<https://docs.openstack.org/install-guide/index.html>
 (https://docs.openstack.org/install-gu...)

asked Feb 22 '18

i have finished all the steps, but i have below error message when i log in from horizon:

Something went wrong! An unexpected error has occurred. Try refreshing the page. If that doesn't help, contact your local administrator.

i tried all the solution on the internet and it didn't work. any advice ?

thank you

Comments

This is most likely some misconfiguration. Start by looking for error messages in the Horizon logs, perhaps also Apache.
